### Situation Awareness Brief

Tuesday, August 14<sup>th</sup> 2018  
As of 0900 CST

# Tropical Weather Awareness

For the North Atlantic...Caribbean Sea and the Gulf of Mexico: 1. A non-tropical complex area of low pressure located several hundred miles south of Cape Race, Newfoundland, is producing cloudiness and thunderstorms mainly to the east of the center. Although latest satellite images indicate that the low has not improved in organization, conditions could become a little more conducive for subtropical rather than tropical development by Wednesday. The system is forecast to move northeastward over the colder waters of the North Atlantic by late Thursday or Friday, which should limit any additional development. \* Formation chance through 48 hours...medium...40 percent. \* Formation chance through 5 days...medium...40 percent.

# Incidents Reported to the State Operations Center (last 24 hours)

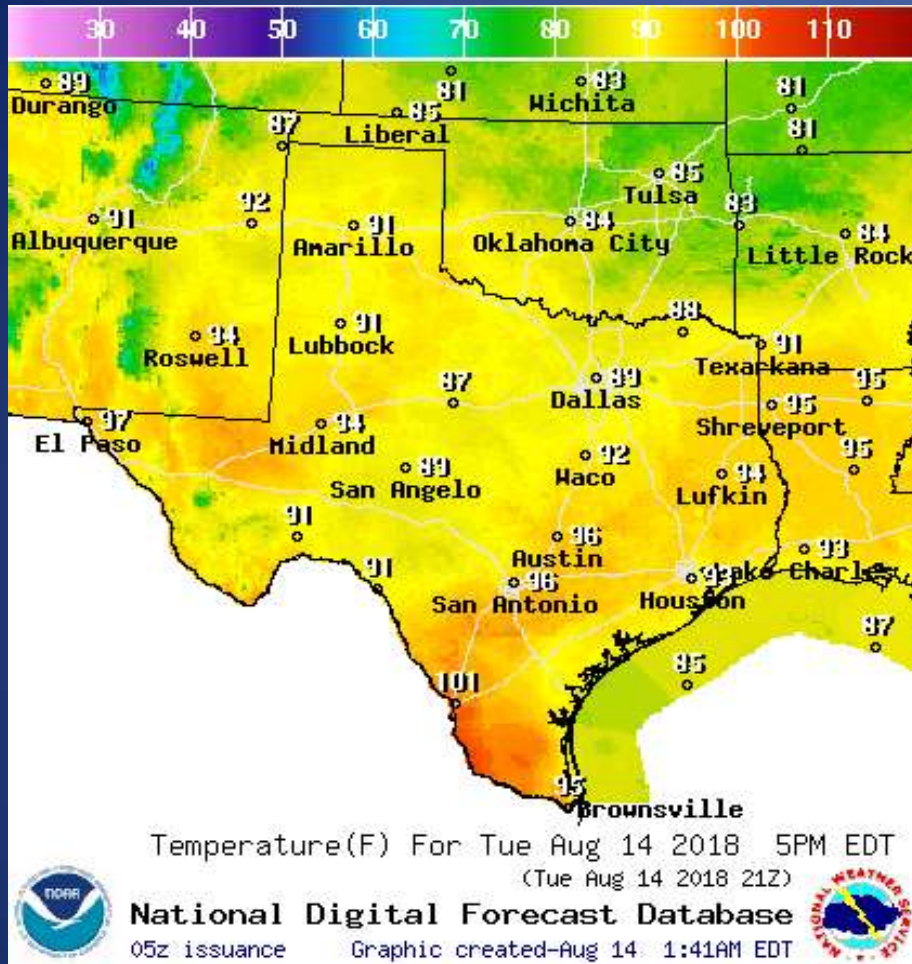

DATE	EVENT / INCIDENT	LOCATION (City/County)	Final Report: Y/N

## More Showers This Morning

Diminishing Rain Chances This Afternoon

Another round of showers will bring additional rainfall to portions of North Texas this morning. The bulk of the rain will be from the Dallas/Fort Worth Metroplex north and northeast to the Red River Valley, including the Sherman/Denison area. Heavy rain may result in some flooding issues, but rain chances will steadily diminish this afternoon.

Where clouds and rain limit sunshine, high temperatures will top out in the 80s. Much of Central and East Texas will reach the 90s again today.

## Today

Weather Forecast Office  
Midland/Odessa, TX  
Issued August 14, 2018 2:27 AM CT

### Thunderstorm Chances

NWSMidland

### High Temperatures

weather.gov/maf

Scattered thunderstorms are expected to develop this afternoon from the Davis Mountains to the Big Bend region, with more isolated storms possible over the Guadalupe Mountains and portions of the Southeast New Mexico plains and Northwest Permian Basin. Any storms that develop will be accompanied by frequent lightning and gusty winds. The stronger storms may also produce heavy rainfall which could result in localized flash flooding. High temperatures will be near normal.
